□   OSIRIA Wall Clocks

Installation / operation manual "Single-sided - Wall Clock"
- Connect the KNX installation bus on the operation component via the bus connection terminal.

Programming physical addresses and the application program
- Quickly press the "Set Phys. Adr." key (red programming LED must light up)
- Carry out the programming the physical addresses and the application program in the clock
  with the KNX-Tool software.

Initial start-up
- When receiving carrier signals for the first time, the hands are put after 20 seconds in the
  the zero position (12:00 position) at first. Then the clock automatically sets
  to the current time.

Transportation lock / Resetting
- Remove the bus connection terminal.
- Press the "Reset Clock" key for approx. 1 second.
- After releasing the "Reset Clock" key, it will reset
  to the zero position (12:00 position).
- The clock is ready for transport when the hands are in the 12:00 position.

Troubleshooting
- Same procedure as with the point "Transportation lock"
- Connect the KNX installation bus on the operation component
  via the bus connection terminal.
- The clock automatically resets after it has received a carrier signal
  (as in initial start-up).
